## Objective

I am seeking a Web Development job that will challenge me, offer me the opportunity to learn, and allow me to contribute to the overall success of the organization.

## Skills

### HTML/CSS/Javascript

The core languages for a web-developer.

### React/Redux

React and Redux are frontend tools that allow the programmer to build single page websites and manage state (data) efficiently.

### Ruby on Rails/PostgreSQL

Rails and PSQl allows the programmer to rapidly build a backend server for their website.

## Experience

### MortalNote

September 2018

Head Web Developer

A Clone of Evernote, MortalNote is a Single Page Web App built using React, Redux and Rails. It can be found at: mortal-note.herokuapp.com

### Wigo

June 2017

Head Web Developer

I built the underlying framework of the site, and handled all back-end functionality. In addition, I managed my team of three Web Developers in making the web page responsive on cell phones. (Wigo.surge.sh)

### RGB Applications

July-August 2017

Front-End Web Developer

I worked on a team of seven people: one product manager, one UX designer, two iOS developers, and two other web developers. We built a support-ticketing website. I specialized on the application's backend communication with Firebase.

## Education

### App Academy

July-October 2018

Full-Stack Web Development Intensive Bootcamp.

### Vassar College

2014-2017

BA, Religious Studies, 3.65 GPA
